Diseases of the Feet in Babylonian-Assyrian Medicine A Study of Text K.67+1

by **Sona Choukassizian Eypper, Berlin**

A K.67+K.2592 (AMT 73,1; 74; 75,1)+ K.1714 (AMT 32,2)+ K.1714 (AMT 100,3)+ K.8809 (AMT 15,3)+ 79-7-8,163 (AMT 18,5)

B VAT 8772+15549 (BAM 124)

Text K.67+ which is presented in this contribution is an important ancient Near Eastern source in the study of diseases of the feet. It is a Neo-Assyrian tablet from Kuyunjik published in R.C. Thompson, Assyrian Medical Texts (henceforth AMT). In my on-going study of these texts, I have often noticed that older as well as more recent publications that refer to this text ignore the fact that other smaller fragments also published in AMT have been joined to K.67+. Hence reference is always made to each of the individual fragments. One contribution of the present study is that it presents K.67+ in its entirety with consecutive line numbering, transliteration, and translation.² K.67+ is a two-column tablet the top and bottom of which are unfortunately missing. Due to the lack of a colophon, the authorship and other information it might have contained, whether for example it formed part of a series, remain unknown. It can, however, be safely assumed that it was the work of an $as\hat{u}$, a physician, and probably not of an ašipu, an incantation priest. The tablet deals with afflictions of specific parts of the feet, beginning with what are probably the ankles and ending with the toenails. It is evident that the information in this tablet was culled from other sources. This can be demonstrated in the differing spelling (syllabic / logogram) of the same noun or verb even within a given column. It is also evident that the compiler of K.67+ had access to an Aššur text, BAM 124 (VAT 8772+15549), that also deals with diseases of the feet.³ In fact it is through K.67+ i 48 that the incipit of BAM 124 (Ms. B) can be emended. A part of our text, col. i 48-ii 59, is parallel to BAM 124 col. i 1-32-col.ii 26-50 from which the compiler of K.67+ carefully copied, including a discrepancy in the text that he duly noted as a variant under the main line in an erasure (see footnote to Col.i 65a below).

comments and suggestions. My thanks also go to Dr. U. Steinert for photographing the tablet for me and for our many helpful discussions.

¹ This paper is dedicated to the memory of Dr. William A. Ward (1928-1996), my primary professor at the American University of Beirut. I wish to thank Prof. M. Geller for reading the manuscript and for his valuable

² The commentary is kept short, as this text will be incorporated in a future larger work by the author on diseases of the feet in Babylonian-Assyrian medicine.

³ Franz Köcher, *Babylonisch-Assyrische Medizin in Texten und Untersuchungen* II (Berlin: Walter de Gruyter & Co. 1963) Tafel 9-15. (henceforth *BAM*)

Although the first eighteen lines of col. i of K. 67+ are fragmentary, two aspects can be ascertained. Firstly it most probably begins with the disease of the *kabbartu* part of the foot,⁴ and secondly it offers in its first column the possible cause of this disease or rather the manner in which the disease was contracted. This text gives five causes of the sickness of the kabbartu, the first of which is partially recognizable (lines 1-12). This cause was attributed to the afflicted person's inadvertently stepping into (used) wash water probably in a given location. A ritual might also have been described. The second cause is the infringement of a taboo, as in eating something taboo (line 13). A short ritual follows (lines 14-17) addressed to Ea, which also includes a prescription. The third manner in which the sickness of the *kabbartu* is contracted is stepping in wash water without reference to a particular location. In a ritual and the prayer addressed to Marduk (lines 18-22) it is clearly stated that the afflicted person has "knowingly or unknowingly" stepped in wash water. A detailed ritual was to be conducted before Šamaš, followed by a prescription for a bandage. The fourth manner in which this sickness can be contracted is described in lines 25-29, describing how the individual has stepped on a particular kind of cultic socle. A ritual is to be performed before Šamaš. After two more prescriptions for bandages, another ritual is described for what seems to have been a probable fifth cause for contracting the sickness. The individual has stepped on something pure, the identity of which remains unknown, as the text is broken at this point. An elaborate ritual is addressed to Ea, followed by a single prescription for a bandage. The text continues in the remainder of this 71-line column by describing specific symptoms of the afflicted kabbartu with their respective prescriptions for treatment. There are, therefore, four complete rituals in this column and it can be surmised that the first lines of this column probably included a ritual as well that would have been performed to absolve the sin of stepping into wash water in a particular location.

Although the first thirty-three of the seventy-two lines of col. ii are missing, the column more than likely continued with additional prescriptions for the treatment of the sickness of *kabbartu*. Beginning with line 38, however, the mode of treatment changes. Now we find prescribed the rubbing of the afflicted area with oil and sprinkling it with dried *materia medica*. Clearly, sores have developed. This listing of treatments is unexpectedly interrupted in lines 46 and 47 by decidedly negative prognoses. In line 46 we read that the patient would die, despite temporary signs of recovery, as he was seized by *māmītu* (curse). Death would also occur (line 47) should the disease produce *ruṭibtu*, 5 a suppurating (lit. dampness) sore. Although these two lines seem out of place, they were probably added to draw attention to the process of the gradual worsening of the condition of the feet as sores appear. Following this interruption, the text resumes listing prescriptions, firstly two again for bandages and beginning with line 51 a series for the application of medication on sores that appear on the feet. Sores develop also on the patient's groin (*kappaltu* col. ii 56). This condition reaches its climax in lines 60 and 61 in which the patient's feet are also described as now being full of sores. At this point a rather elaborate ritual (lines 62-67) is to be performed before Šamaš.

⁻

⁴ In view of the evidence, the *kabbartu* referred to the ankle. See below, "Diseases mentioned."

⁵ A stage in the development of the sickness of the *kabbartu*. See Scurlock and Andersen, *Diagnoses*, 210. K. 67+ has a number of treatments prescribed for sores that develop on the feet. Some of these sores appear in Tablet 33 of the Diagnostic Handbook: *šumma*(DIŠ) *simmu*(GIG) *šikin*(GAR)-*šú* "If the appearance of the sore," N. Heeßel, *Babylonisch-assyrische Diagnostik*, 353-374.

In order to better understand K.67+ in general, and the course of the sickness of the kabbartu in particular, the reading for the logogram GIG should be differentiated according to the context. While generally the reading *murşu* "disease" is indicated, the reading *simmu* "sore, lesion" would in other instances be more appropriate. A reference in UET VI/3 895,6 an Old Babylonian text, is of particular interest to us in this case. This text presents in brief form prescriptions for eleven diseases involving sores and ends with a prescription in line 39 for ana sí-im-mi-rim ša ka-ba-ar-tim "Against the sore of the kabbartu." Should then all our references relating to the kabbartu be read simmi kabbarti "sore of the kabbartu" instead of murus kabbarti "sickness of the kabbartu"? Probably not. Although the development of sores is involved in the disease of the *kabbartu*, K.67+ differentiates between the general condition of the swelling and the later development of the sores, a fact that can be observed in the prescribed treatments. For the general treatment of the disease of the *kabbartu* warm bandages are prescribed, while sores are treated with dry materia medica. It is difficult to generalize from the single *UET* reference that refers to a particular treatment of the sore that develops as the disease progresses. By the syllabic writing of the word simmu, the writer of the text wanted to make sure that it was understood that the treatment by sprinkling a dry substance was to be used on the sore of the kabbartu condition, as can also be observed in K.67+. In fact, in K.67+ ii 45 the identical treatment with pomegranate skin, as in UET 895, 40, is prescribed, but with additional details. Furthermore, it should be considered that, like several later Babylonian-Assyrian medical texts, K.67+ follows a familiar pattern: *šumma*(DIŠ) amēlu(NA) murus(GIG) X marus(GIG) "If a man is sick with the X sickness" which is followed in texts listing a number of treatments for a single disease, or for what the $as\hat{u}$ or the \bar{a} sipu considered part of that disease. In this context, it should be noted that not all of the varieties of sores that are dealt with in this text are exclusively related to afflictions of the foot. They can appear elsewhere on the body as well as on the foot. Hence, the reading of GIG as simmu or murşu depends on context.

At this point the question is to what extent these various sores should be considered as a development of the affliction that originated on the *kabbartu* of the patient's foot. For the Mesopotamian physician, they were probably considered to be related to the original condition of the *kabbartu*.

In the final paragraphs of the second column, the development of many sores most probably as a further manifestation of the afflicted *kabbartu* is described, closing this section with a detailed ritual (ii 61-67). The text then resumes with prescriptions for the *rutibtu* (dampness) disease which is described as a sore that appears on the scrotum or on the foot. It is the first disease mentioned after the *kabbartu*.

Only forty-one lines of col. iii can be accounted for. The listing of prescriptions for the treatment of sores on the feet continues. With line 13, however, a new element is introduced. A *bubu'tu*-vesicle develops on the patient's foot. We are not informed which part of the foot

⁻

⁶ I thank Krisztián Simkó (BabMed Berlin) for drawing my attention to this reference. A. Shaffer, *Ur Excavations Texts*, VI/3: *Literary and Religious Texts*, Plate 90, 895.

is affected, but this ailment is called *sagbānu*. A series of prescriptions is listed in a very laconic form beginning with the logogram MIN "ditto", presumably a continuing reference to the *sagbānu*-disease. Beginning with line 28 and probably continuing to line 41, prescriptions for *nuḫurtu*-disease are listed. As col. iii is fragmentary after line 33, nothing definitive can be said as to its content. As the columns of K.67+ have about 71/72 lines, it can be assumed that thirty-one or thirty-two lines are missing from the bottom of col. iii.

The first thirteen prescriptions of col. iv begin only with "ditto". For this reason the disease to which they refer cannot be determined. They, however, clearly deal with the treatment of sores. Most of the prescriptions instruct the attending $as\hat{u}$ to first wash the sore and then apply oil to it before proceeding with the additional applications.

Although this tablet is unfortunately incomplete, a structure in the analysis of disease can be discerned. The sickness of the *kabbartu* at some point during its course develops sores (suppurating sores). The text deals with a number of other sores that were probably unrelated to the disease of the *kabbartu*.

As in many Babylonian-Assyrian medical texts, K.67+ extensively uses the expression DIŠ KI.MIN "If ditto" at the beginning of a series of prescriptions to denote that the condition is the same as that mentioned above. This is a space-saving measure which also avoids the unnecessary repetition of identical symptoms with alternative prescriptions. In several instances in column iii, e.g. line 18 or19, the KI.MIN "ditto" appears at the end of the prescription after the listing of the *materia medica* and stands in this case for the method of their application.

Below is a brief summary of the conditions described in K.67+ reflecting the structure of this tablet.

taoret.	
Col. i 1-ii 45	kabbartu (ii 1-33 missing, ii 34-45 more than likely kabbartu)
Col. ii 46-47	Prognoses (for rutibtu / rušumtu in parallel Ms. B)
Col. ii 48-55	kabbartu
Col. ii 56-67	Development of sores in the groin (kappaltu), and numerous sores on
	the feet. These sores are not identified by name.
Col. ii 68-iii 12	ruṭibtu
Col. iii 13-iii 27	sagbānu (bubu'tu). The only title of an incantation is mentioned in line
	23.
Col. iii 28-iii 33	nuḫurtu
Col iii 34-iii 40	Fragmentary
Col. iii 41-iii 72(?)	Missing
Col. iv 1-16	Disease cannot be ascertained
Col. iv 17-23	Conditions of the heel
Col. iv 24-25	Condition of the sole of the foot
Col. iv 26-32	Infection as a result of scatching
Col. iv 33-35	Conditions of the toes (?)
Col. iv 36-46	Conditions of the toe nail.
Tablet breaks off	

Diseases mentioned:

There are four afflictions mentioned by name in this text that involve the feet or the lower extremities of the body. An attempt at identifying these, though interesting, is a difficult endeavor and should be approached cautiously. Although the Mesopotamian asû had a profound ability to observe, record details of symptoms, and attribute that group of symptoms to a particular disease, a one-on-one identification of that disease with a particular modern ailment is rarely viable. Such an endeavor could, however, point us in the right general direction in any attempt at identifying the diseases. Often a given Mesopotamian disease and its symptoms could correspond to two or more related modern-day diseases. As J. Scurlock and B. Andersen write, "Trying to diagnose infections that occured three or four millennia ago is like trying to hit a moving target." But they then add, "It is clear, however, that infectious disease patterns that bear striking similarity to modern diseases running the gamut of microorganisms from bacteria and viruses to fungi and parasites were already well established in ancient Mesopotamia."8 As the strain of the pathogen and therefore the course of the disease may have changed over the millennia, K.-H. Leven cautions us against the dangers of applying "retrospective diagnosis" to ancient medicine. Mesopotamian world indeed had an abundance of disease, but the sketchy ancient descriptions seldom bear the burden of modern proof.⁹

1) *kabbartu* (col. i 1-70 and ii-55)

It is interesting to note that the treatments of a particular condition of the *kabbartu* part of the foot occupy a considerable portion of this tablet. It seems as though it was considered as the originating source of a number of other afflictions of the lower part of the body. This, however, is not necessarily so. Based on lexicrographical evidence, the *kabbartu* is part of the foot, and more specifically the "side of the foot," and an entry in an Old Babylonian bilingual lexical text AUAM 73.3176 rev. 15 [SAG].GÎR = *ka-bar-[ti]* refers to the "top part (head) of the foot." D. Schwemer identifies *kabbartu* as the "Sprungbein" (anklebone) in a ritual from Hattuša (KUB 37, 43 rev. 10-22). The ritual involves taking the left anklebone from a dead man, rubbing it with oil, and dressing it with a headdress which would clearly represent a female person as a demonic female witch. The identification of *kabbartu* as the ankle part of the foot is confirmed by the entry in Erimhuš "side of the foot," and by the Old Babylonian reference, above, that considers the *kabbartu* as the "head" of the foot, i.e. the ankle. The evidence gathered from K.67+ also clearly points to a disease that affects that part

⁷ The words "affliction" and "condition" are used because of their more general connotations, as not all that is described is a disease or an illness. A number of the other observations described are different kinds of "sores" and pustules.

⁸ Scurlock and Andersen, *Diagnoses*, 86-87.

¹³ *Ibid*. 115-116.

of the foot, a condition that seems to have been observable enough to warrant a detailed description in the present text and also in the parallel reference Ms. B.

If the *kabbartu* refers to the "side" and "top" of the foot, to which bone does it refer? The ankle joint is composed of three bones:

- 1) The *tibia* (commonly, shin bone). The bone felt on the inside of one's ankle is part of the base of the *tibia*.
- 2) The *fibula* is the thinner bone that runs next to the *tibia*. The lower end of the *fibula* is felt on the outside of one's ankle. This is the bone that is commonly called the ankle bone.
- 3) The *talus* which sits above the heel bone is located underneath the *tibia* and *fibula* and in function resembles that of a "ball joint" connecting the lower leg with the foot and giving the foot a wide range of movement. Unlike the *tibia* and the *fibula*, the *talus* cannot be felt or seen.

In the ritual from Hattuša cited above, the left *kabbartu* that was to be excised from a dead man could have only been the *fibula*, because that is the anklebone which was easily seen and felt. The base of the *fibula* would have formed the "head" of the figurine.

We conclude that the *fibula* was referred to as *kabbartu* in Mesopotamian medicine. ¹⁴ The disease of the ankle, *muruṣ kabbarti*, referred to the unhealthy condition of the ankle, more specifically that characterized by swelling and sores. Thus *kabbartu* referred both to a body part and to a disease affecting that body part.

Stages (pathology) of *kabbartu* as described in K.67+

I 1-42 causes

I 43 First development of disease with "white and black" caused by mamītu

I 48 first serious progression: "penetrating" to the bone (?) flesh is white and black

I 52 heels are swollen

I 55 heel full of clay

I 57 feet full of blood

I 66 appearance of his flesh is confusing

I 68 muscles of feet are stiff

I 70 he cannot walk around (by himself)

Col ii

II 46 he suffers greatly from *kabbartu* because the "curse" has seized him, prognosis is death.

II 47 If *kabbartu* has produced *ruţibtu* "moistness", prognosis is death.

II 48-55 Prescriptions for kabbartu

Not related to kabbartu:

The text lists a number of suppurating sores that appear on the lower extremities.

II 56 the *kappaltu* is affected, but condition is not described

¹⁴ Contra *CAD* M/I 92 s.v. *maḥirtu* (a bone of the leg, perhaps the fibula). For *maḥirtu* in the present text see note to col. iii 28.

II 60-65 Feet full of sores and they have a particular duration

II 68 An itching sore comes up either on the foot or on the scrotum, the ruţibtu qilûtu disease

II 70 An itching sore comes up on the foot, the *ruţibtu* disease

III 13 A sore that is like a boil, *sagbānu*

III 28 mahirtu-bone is nuhhuru

III 31 nuhurtu disease

IV 17 The heel is broken

IV 19 The heel is split

IV 23 Heels constantly sore

IV 24 Soles of the feet hurt

IV 26 Infection due to scratching

IV 36 The toe nail has either fallen off or [...]

The disease *kabbartu* has been variously identified. The most recent identification of *murus* kabbarti as "Mycetoma" is proposed by Scurlock and Andersen. ¹⁵ Mycetoma is commonly called Madura foot after the region of Madura in India where the disease was first identified in the mid-1800s. Although Mycetoma affects primarily the foot and lower leg, infecting the dorsal aspect of the forefoot, it can also occur anywhere on the body, the hand being another common site. Mycetoma is endemic in Africa (especially Sudan and Somalia) and India. It can be found in the Middle East (between the latitudes 15°S and 30°N), but is not endemic in Iraq. Another aspect that should be taken into consideration is the fact that Mycetoma is a disease that develops very slowly and can take several years after the initial entry of the bacteria or fungus into the body through a minor injury in the skin before even a subcutaneous nodule appears. As it is completely painless, it commonly remains unnoticed by the patient for some time. After a number of years the nodule itself develops into a massive swelling which ultimately ruptures the skin and lesions can be observed. Penetration to the bone is not common. Did the Mesopotamian physician actually recognize that all the symptoms he listed belonged to one particular disease that developed gradually over a number of years? It is rather the case of the physician listing several possible conditions that effect the ankle which may have included Mycetoma among other possibilities. The murus kabbarti probably referred rather to the condition of swelling (or thickening) of the dorsal aspect of the foot and ankle side of the foot, regardless of the cause.

2) *sagbānu* (iii 12-27)

As described in our text, the *sagbānu* is a boil on the foot that starts as a *bubu'tu* that festers and develops into what is then referred to as *sagbānu*. This is the only entry through which some idea can be gained about this skin condition. The entry in Tablet 33 of the Diagnostic Series, line 64 is damaged and probably referred to a part of the body that "is seized and is black: its name is *sagbānu*." This would indicate that the condition is most likely a disease and not only a sore.

¹⁵ J. Scurlock and B. Andersen, *Diagnoses*, 78.

¹⁶ N. Heeßel, *Diagnostik*, 362.

Sagbānu appears amongst names of other skin conditions and diseases in an Old Babylonian list of incantations, indicating that these diseases had descended from heaven.¹⁷ An identification of theses diseases, however, remains difficult.

3) rutibtu / rušumtu (ii 68-iii 12)

In K.67+ ruţibtu is mentioned in three contexts. First, in col. ii 47 in which kabbartu develops ruţibtu which is considered to be fatal for the patient. In the parallel Ms. B ii 35 ruţibtu is replaced by rušumtu, a fact that could refer to a possible relationship between these two kinds of sores. It should be especially noted that ruţibtu / rušumtu would be fatal if it develops during the course of the kabbartu condition. In the prescriptions that follow, a worsening of the condition with the appearance of several sores is observed. A ritual closes this part of the text which could possibly indicate that the reference to a special kind of ruţibtu that follows is not to be considered the fatal kind mentioned earlier.

Second, in col. ii 68 a prescription for a specific kind of very itchy *ruţibtu* sore is presented. It is called *ruţibtu qilûtu* "burning *ruţibtu*" as translated by Surlock and Andersen. ¹⁸ The present context probably refers to the appearance and color of this sore, possibly as it forms a wet scab, hence the analogy to 'burnt material' in "'damp' burnt material." As this sore can appear either on the foot or on the scrotum, a suppository is prescribed.

Third, in col ii 70 reference is made to a *ruţibtu* disease. After these references, a series of ten prescriptions is given.

After the fatal prognosis in ii 47, the text resumes the listing of prescriptions for *kabbartu* ii 48-55. Beginning with line ii 56 prescriptions are offered for sores and are accompanied by a ritual (ii 61-67). The name of the sores is not given. Following this, a series of prescriptions for the *ruţibtu* sores is given (ii 68-iii 12), which leaves us with the question whether the preceding prescriptions (ii 56-67) are also to be considered for *ruţibtu*.

Our text does not offer more detail, but the fact that sores are being described can be gathered from the entries in tablet 33 of the Diagnostic Series, lines 18 and 19 where *ruţibtu* is said to be "like the *ummedu*, he scratches (and) constantly water flows out." 19

4) *nuhurtu* (iii 28-40)

The identity of the disease *muruṣ nuḥurti* (iii 32) remains speculative, as both K.67+ and its parallel Ms. B do not offer a description of the symptoms of this disease. The adjective form in a prescription for a bandage for a *šēpi nuḥurti* (iii 31) "*nuḥurtu*-foot" is also of little help in identifiying this condition of the foot. One reference, however, refers to a bone that is

¹⁷ A. Goetze, "An Incantation Against Diseases," *JCS* 9 (1955) 8-10. Although only a small number of medical texts from the Old Babylonian period have survived, a thematic agreement can be observed between the incantations and many of the diseases mentioned in medical texts. N. Wasserman, "Between Magic and Medicine – Apropos of an Old Babylonian Therapeutic Text against Kurārum Disease" in *Disease in Babylonia*, I. Finkel and M. Geller (eds.) 40-61.

¹⁸ J. Scurlock and B. Andersen, *Diagnoses*, 210. *CAD* Q s.v. *qilûtu*, "firewood, burnt material" 252a reads this reference KI-*lu-tum* as the name of a disease.

¹⁹ N. Heeßel, *Diagnostik*, 354. J. Scurlock and Andersen, *Diagnoses*, 210.

nuḥḥuru, as in iii 28 *maḥirtašu nuḥḥurat* "his tibia is *nuḥḥuru*". This condition, therefore, can affect the leg bone and the foot.

Other conditions mentioned:

As the text breaks off leaving col. iii incomplete, the diseases that might have been subsequently mentioned remain unknown. Nine prescriptions for treating conditions of the heel are listed in col. iv 17-23 (see footnotes to lines iv 17 and 19).

Although the preserved portion of col. iv is damaged, it clearly deals with conditions of the toenails. The nature of these conditions can only be guessed at, which, as pointed out earlier, is risky. The fact that a patient's toenail can actually fall off is a very common complication of advanced type 2 diabetes accompanied by sores on the foot that do not heal and also fungal infections, among other problems. It is, therefore, possible that the symptoms described in iv 24-45 are to be related to a diabetic condition.

The author of K.67+ has compiled all clearly observable conditions that can afflict the lower extremities and more particularly the feet, a fact that bears witness to the ability of the Mesopotamian physician to observe carefully paying great attention to detail. The ability to look beyond the observable and differentiate the causes of these symptoms was to come only several centuries later. But careful observation and attention to detail are always the first steps in scientific thought.

<u>Tools used</u>: copper *tangussu*-vessel, *laḥannu*-bottle.

Procedures in the preparation of the *materia medica*: drying $(ab\bar{a}lu)$, crushing $(ba\bar{s}\bar{a}lu)$, pounding $(s\hat{a}ku)$, crushing/grinding $(pa'\bar{a}su)$, boiling $(ba\bar{s}\bar{a}lu)$, heating in an oven $(ina\ tin\bar{u}ri\ sek\bar{e}ru)$, charring (urruru), roasting $(qal\hat{u})$, mixing $(bal\bar{a}lu\ and\ em\bar{e}du)$, decocting $(rab\bar{a}ku^{20},\ usually\ in\ kas\hat{u}\ juice$, but also in ghee, lard, beer, or milk), spreading on a piece of cloth $(ter\hat{u})$, piling up $(tab\bar{a}ku)$.

<u>Treatments:</u> bandaging $(\underline{sam\bar{a}du})$, rubbing with oil or ghee $(pa\underline{s}\bar{a}\underline{s}u)$, wiping the sores $(kap\bar{a}ru)$, bathing $(ra\underline{h}\bar{a}\underline{s}u)$ and $mes\hat{u}$, sprinkling of dried materia medica $(sar\bar{a}qu)$ and $zar\hat{u}$, applying medication $(nad\hat{u})$ lit. throw), pouring and administering an enema $(tab\bar{a}ku)$ and $\underline{sap\bar{a}ku}$, daubing $(eq\hat{u})$, preparation of an anal suppository (allanu).

²⁰ According to *CAD* s.v. *rabāku* "to decoct."

 $^{^{21}}$ The suggested emendation and reading are based on context. For the adjective *esru* relating to a street see *CAD* E 338a s.v. esru. The reading for suqannu is conjectural, and I am not aware of another reference for this form of spelling as it appears in our present text. See *CAD* S 398b s.v. *suqinnu*.

22 The reading is a possible suggestion, as in the first ten lines of this text reference is often made to location.

A likely emendation as e.g. line 24 below.
 The reading asakku "taboo" is a suggestion based on context, as the disease is seen as being caused by fault of the patient knowingly or unknowingly as in lines 18 and 25.

Translation

Col. i

1 l	L	J clean ground. Into	wash water	
i 2	[he has stepped] He ac	ccidentally stepped either	onto a
	blocked street or onto a	suqannu-road (a byroad).

²⁶ Emendation based on similar context as in AMT 69, 2: 4 and parallel KAR 1991: 3. agubbû(DUGA.GÚB.BA)

²⁷ The constellation Lyra is meant here. MUL.ÙZ appears as a constellation, P. Felix Gössmann, *Planetarium Babylonicum*, Rome: 1950, ŠL Band 2, Teil 4, sub 145 MULUZA, 61.

²⁸ Probably the *kirbān eqli* was meant.

²⁹ For an explanation of the instruction *šiddī tašaddad* see S. Maul *Zukunftsbewältigung*, Baghdader Forschungen 18, (Mainz: Verlag Philipp von Zabern, 1994) 55, n.144. He questions the meaning "curtain" offered in the dictionaries (*AHw* and *CAD* s.v. *šadādu* 1b). Clearly it denotes an item that serves to separate the ritual area of the altar from the larger rest.

³⁰ For kian

³¹ Not spelled in the usual expected form, but see *KAR* 26, 43.

³² A well-attested spelling of the plant name ^ÚIN.NU.UŠ.

i 16	You draw [water] (and) let it stand under the constellation Lyra (overnight), <i>kirbān eqli</i> -plant,	
i 17	kukru, atā'išu, kurkānû [] you decoct in a tangussu-vessel [
i 18	If a man is sick with the sickness of the <i>kabbartu</i> , caused by stepping into wash water. A <i>qadištu</i> -woman draws water from a well (and) into this water	
i 19	[] x you put. You let it stand under the stars (overnight). In the mornin at sunrise (as soon as the sun rises) you bring it down. You set up a <i>paṭīru</i> a before <i>Šamaš</i> (and) you place a censer with juniper incense.	
i 20	You draw the curtain as that of the diviner. You fill a <i>laḥannu</i> bottle with water (and) a <i>laḥannu</i> bottle with beer. Under the stars you set up a <i>paṭīru</i> altar. Thus you have him (the patient) speak:	
i 21	Knowingly or unknowingly he stepped into wash (water). Now before you (is the dark appearance in the sore (that is) in my body	
i 22	may the wise leader <i>Asalluhi</i> , the incantation priest of the gods, expel (it), he recites (the prayer) 3 times and he makes a libation of water and beer.	
i 23	If ditto: ³³ you dry <i>kamkadu</i> , <i>kamantu</i> , tamarisk, <i>maštakal</i> , <i>aprušu</i> , <i>qān šalāli</i> , river locust,	
i 24	you crush (and) mix (it) in <i>isqūqu</i> -flour. You decoct (the mixture) in ghee and beer in a <i>tangussu</i> -vessel. You spread ³⁴ it on a piece of cloth and bandage (the affected part).	

_

³³ The "ditto" sign refers to the disease as mentioned in the above lines, i.e. *kabbartu*

³⁴ *CAD* L, s.v. *lubāru* 230 tranlates references with *teterri* "you spread (the salve) on a piece of fabric." In *CAD* T s.v. *terû* A 103 "to extract, squeeze or press out liquid" and these references are translated as "you extract the liquid with cloths." The process of decoction produces a concentrate that can be spread on a piece cloth or leather easily, which would make sqeezing unnecessary.

³⁵ Under the sign HUL on the ruling, a faint *lum-ni* can be discerned.
36 The emendation is conjectural as *kukru* very often appears together with *burāšu*.
37 The emendation is based on context, similar to lines 41 and 42 below.
38 The stone of the *ḫarūbu* (*ḫarūpu*) the carob. (
39 Ea was meant and not Anu as the prayer in line 37 is addressed to Ea only. If a second deity were meant by the DINGIR MIN, the conjunction *u* would be expected. Was Enlil meant by DINGIR.MIN?

i 25	If a man is sick with the sickness of the <i>kabbartu</i> , he has stepped on a <i>barasigû</i> -cultic socle, he stands before Šamaš, at the location of the <i>barasigu</i> .
i 26	Wherever this altar (is): he places a censer with juniper incense (and) piles up leaves from garden trees. Before Šamaš he places 7 big loaves of bread (and) 7 small loaves of bread upon the leaves
i 27	He fills one <i>laḥannu</i> -bottle of water (and) one <i>laḥannu</i> -bottle of beer and places (them) to the side of the leaves from the garden. He spreads out a <i>tirṣu</i> . 40
i 28	Thus you have him speak: knowingly or unknowingly, [I stepped] on the socle of the throne of the great gods.
i 29	On this day the place of evil [] before Šamaš may I recover. []
i 30	If ditto: <i>aktam</i> , <i>bušānu</i> , juniper, <i>suādu</i> , <i>kupsu</i> you dry, you crush (and) [mix it] in <i>isqūqu</i> -flour.
i 31	You decoct (the mixture) in ghee and beer in a <i>tangussu</i> -vessel. You spread it on a piece of cloth. You rub the sore with ghee (and) [you bandage] (the affected part).
i 32	[] seed of the <i>anameru</i> -plant, seed of the <i>puquttu</i> -plant, date stone, carob stone, <i>irrû</i> colocynth seed,
i 33	You decoct [(the mixture) in ghee and beer in a <i>tangussu</i> -vessel]. You pour in it boiled <i>šintu</i> . You bandage. You do not untie it (the bandage) for 3 days.
i 34	[] he stepped on a pure []. Before <i>Ea</i> (and) Enlil (?) you heap up garden plants at the bank of a river.
i 35	[] You fill one <i>laḥannu</i> -bottle with water (and) one <i>laḥannu</i> -bottle with beer and you place them to the side of the garden plants. You place 4 loaves on his right knee,

⁴⁰ CAD T s.v. tirșu 3. 428b translates "ritual preparation^(?)" W. Farber, Lamaštu, offers two translations. In Lamaštu, Series I, (p. 73) line 24 tir-șa ta-tar-ra-aș trans. p. 147 "you arrange the layout (for the ritual). In Lamaštu Series III line 111 tirșa tatarraș(LÁ-aș) is translated (p.193) "You lay the table." Although the sentence tirșa tatarraș/itarraș in such contexts clearly denotes a ritual act, it probably denotes something rather more specific, as it appears at the beginning of the ritual or, as in this case, at the end. What sense would it make to add at the end of the ritual instructions "you spread out the presentation" when all the elements of the ritual are already laid out? Possibly a tirșu was some sort of cloth (?) covering that would be spread out on the altar before or after, as in this instance, covering the ritual elements.

⁴⁷ Following F. Köcher's emendation after collation of tablet. It should be noted that, although the plants are seemingly identical, the sequence in the listing of the plants in Text A and B is not identical, which makes any emendation of the lacunae in Ms. B i 2-3 difficult. Both $lip\bar{a}ru(^{GIS}MI.PAR)$ and $\check{s}all\bar{u}ru(^{GIS}\check{S}ENNUR)$ appear in the list. The sign in Ms. B i 4 is <u>not</u> $^{GIS}\check{S}ENNUR$ as read in J. Scurlock, *Sourcebook for Ancient Mesopotamian* Medicine, 444 and also in the transcription BabMed sub "Corpora". It is a clear PAR₇. Evidently, therefore, the plant *lipāru* was intended here. Hence following F. Köcher's emendation the reading is GIŠ < MI>.PAR₇. (For the reading PAR or PAR₇, both associated with this plant name, see Borger, Zeichenlexikon, 398).

⁴⁸ Note that the order of the *materia medica* in the parallel text differs slightly.

i 48 If a man is sick with the sickness of the <i>kabbartu</i> at flesh is white dotted with black spots, this disease deeply). You throw (i.e. put) in water a leaf of a <i>lip</i> tree, a leaf of a fig tree, a leaf of an apple tree, a leaf of a tamarisk, a leaf of the <i>qān šalāli</i> -plant, a and a leaf of a <i>buṣinnu</i> -plant. You heat (the mixtur feet (with it).	you bandage his feet (?) andage) for 3 days.

_

⁵³ Interestingly the compiler of K.67+ who more than likely knew the *Aššur* parallel (Ms. B), had probably noticed the discrepancy in Ms. B, i 25 and ii 43 which read SAG.DÙ KU₆. If the scribe of Ms. B meant to say the head of a fish, then the DÙ is a mistake for DU. If, however, he meant the falcon, then he incorrectly wrote a SAG for the SÚR and added the wrong determinative (KU₆ for MUŠEN). The scribe of K.67+ wanted to draw attention to this discrepancy by inserting under his correct SÚR.DŮ^{MUŠEN} what only survive as traces of the error he found in Ms. B i 25, (the ¬DÙ KU₆¬), possibly in an attempt to cover himself. The assumption that the scribe of Ms. B wrote SAG in error for SÚR which would give the translation "falcon-fish" would seem unlikely, as a "falcon-fish" does not appear in the Fish Catalogue (A. Salonen, *Die Fischerei im alten Mesopotamien nach Sumerisch-Akkadischen Quellen*, 142-238), whereas a *summatu*-fish "dove-fish" is attested.

B i 22	If ditto: You dry (and) crush azallû (and) mix (it) in isqūqu-flour
B i 23	You decoct (the mixture) in kasû-juice in a tangussu-vessel. You bandage (the
	foot), and you do not untie (the bandage) for 1 day.
i 65	If ditto: You dry (and) crush [šakirû] (and) mix (it) with malt-"dust". You
	decoct (the mixture) like a mash. You bandage (the foot).
B i 24	If ditto: You dry (and) crush [šakirû] (and) mix (it) with malt-"dust". You
	decoct (the mixture) like a mash. You bandage (the foot).
i 65a	If ditto: You dry (and) crush a falcon. You decoct (it) in kasû-juice. You
	bandage (the foot).
B i 25	If ditto: You dry (and) crush the head of a fish. You decoct (it) in kasû-juice.
	You bandage (the foot).
i 66	If a man is sick [with the sickness of the <i>kabbartu</i> and] the appearance of his
	flesh is confusing ⁵⁴ you dry and crush <i>kamkādu</i> ,
B i 26	If a man is sick with the sickness of the kabbartu and the appearance of his
	flesh is confusing you dry and crush kamkādu,
i 67	crowfoot-plant, (and) [tullal]. You make a decoction like a mash. You bandage
	(the foot).
B i 27	crow[foot-plant], (and) tullal. You make a decoction like a mash. You bandage
	(the foot).
i 68	If a man is sick with the sickness of the <i>kabbartu</i> and [the muscles of his feet
	are stiff], you pound fresh leaf of šūšu-plant, sīḥu-wood, argannu,

⁵⁴ The parallel Ms B i 26: the appearance of the sore is unclear, probably referring to the fact that the physician was unable to identify the kind of sore. JoAnn Scurlock, *Sourcebook for Ancient Mesopotamian Medicine*, 450 translates "the appearance of the sore is confused."

⁵⁵ The parallel text Ms. B has a slightly different listing of *materia medica*.

⁵⁶ What exactly is meant by *še-šen* is unclear. It is possible that it was meant to be used in the application of the crushed river pebble on the sore. Probably from *šišnu* "a rush," *CAD* Š/III, 126 s.v. *šišnu*. In Ms. B the determinative Ú is not written. J. Scurlock, *Sourcebook for Ancient Mesopotamian Medicine*, 452 translates "a palm frond(?)."

⁵⁷ It is interesting to note that both texts in this instance use a verbless clause ending with an adverb. This is not a usual occurrence in medical texts. For a discussion of this grammatical feature, see J. Huehnergard, "On Verbless Clauses in Akkadian," *ZA* 76 (1986) 230 ff. A stative *maruṣ*(GIG) would be expected to end the clause, as there are a number of references from omen texts, for example, in which the adverb *magal* appears followed by the stative form of the verb which would justify the emendation of *maruṣ* in the present context, hence, *magal* <*maruṣ*(GIG)> "greatly suffers". Here the worsening of the condition is being addressed which is attributed to the seizure of the curse, the causing agent. The proposed translation "If a person (has) *muruṣ kabbarti* (and) the curse greatly afflicts him…" is problematic, as in such an instance the adverb *magal* would have appeared before the verb *iṣbassu* (has seized him). J. Scurlock, *Sourcebook for Ancient Mesopotamian Medicine*, 452.

⁵⁸ Very faint traces of the prognosis *ana arkât*(EGIR) *ūmē*(U₄-*me*) *imât*(¬BA¬.ÚŠ).can be discerned.

⁶¹ Also mentioned in Tablet 33, 22 of the Diagnostic Handbook. Heeßel, *Diagnostik*, 354 and commentary 368.

⁶² Contra *CAD* Q s.v. *qilûtu*, 252a reads the trace K[I] to be emended with *-lu-tum* as in line 68 above.

⁶³ Contra *CAD* N s.v. *narbu* b, 350 that reads *şubātu* for TÚG, a term that is rather used to refer to a garment. Our text offers a number of examples in which a piece of cloth is used as bandaging material. Note however that citing the reference in ii 71a above, *CAD* Q s.v. *qutrīnu*, 325b reads *lubārē*(TÚG.ḤI.A).

⁶⁴ The suggested reading is based on the fact that in this text flour is used as one of the *materia medica* in the treatment of diseases of the feet. Flour is also used in censers for fumigation. Although not in the present text, fumigation of the feet is prescribed. Probably some kind of flour used for censers was intended here.

⁶⁵ CAD M s.v. mû A2c), 155b defines this reference under "chemical solutions."

ii 61	If a man's feet are full of sores (and) these sores have a particular course (a fixed duration): when he becomes full of sores, he picks a sunflower

iii 1	You pound white plant. You apply (it) on (the sore). You pound <i>imhur-limmu</i> (and) <i>imhur-ešra</i> (plants). You apply (them) on (the sore). You pound seed of the <i>maštakal</i> -plant (and)	
iii 2	seed of the <i>kamkādu</i> -plant. You apply (them) on (the sore). You pound <i>aktam</i> -plant (and) seed of the <i>urānu</i> -plant. You apply (them) on (the sore). You pound juniper (and) <i>kukru</i> -plant. You apply (them) on (the sore).	
iii 3	You pound <i>urnû</i> -plant. You apply (it) on (the sore). You pound <i>kazallu</i> -plant (and) <i>nīnû</i> -plant. You apply (them) on (the sore). You pound <i>habburu</i> -plant, <i>qān šalālu</i> -reed (and)	
iii 4	aktam-plant. You apply (them) on (the sore). You pound the root of the uzun lalî-plant, (and) tamarisk seed. You apply (them) on (the sore).	
iii 5	Leaf of <i>lipāru</i> -tree, leaf of a <i>šūšu</i> -tree, leaf of an <i>ēru</i> -tree, juniper, <i>kukru</i> -aromatic plant: You apply (them) wherever (there is) a sore.	
iii 6	You apply over the sore <i>argannu</i> -plant (and) <i>barirātu</i> -plant. You heat (the plants) in an oven. ⁶⁶	
iii 7	You rub his feet (with it). You mix cedar oil, <i>kukru</i> -aromatic plant (and) <i>ankinutu</i> plant. You rub (his feet).	
iii 8	You pound seed of the <i>maštakal</i> -plant, seed of <i>sikillu</i> -plant. You decoct (them) in <i>kasû</i> -juice. You bandage (the feet).	
iii 9	You decoct in <i>kasû</i> -juice seed of <i>uzun lalî</i> -plant, seed of the <i>šakirû</i> -plant, seed of 'dog's tongue'-plant. You decoct (them) in <i>kasû</i> -juice. You moisten ⁶⁷ (the mixture) with oil. You bandage (the feet).	
iii 10	You pound <i>kamantu</i> -seed (and) <i>papparhû</i> -seed. You decoct (them) in <i>kasû</i> -juice. You bandage (the feet).	
iii 11	These plants he drinks in beer (and these plants) you mix (them) in wax (and) bandage (the sore). ⁶⁸	
iii 12	You pound <i>kirbān eqli</i> , leaf of <i>lipāru</i> , leaf of anise. You apply (them) on the surface (of the sore).	

⁶⁶ This line and line 7 involve three different procedures. First, a treatment for the sore. Second, apparently the same aforementioned plants are to be heated in the oven and the feet are rubbed with them. Third, two plants are mixed with cedar oil and rubbed presumably on his feet.

⁶⁷ "Moisten" here has the connotation of "folding in" and not of stirring.

⁶⁸ It seems that the prescribed *materia medica* were to be administered in two forms, taken internally and then also as the content of a paste for bandaging the sore.

⁶⁹ In association with *šaššatu*, (A. Goetze, "An Incantation Against Diseases," *JCS* 9 (1955) 8 *ša-ak-ba-nu*, and 13). Also *ašû*, *maškadu*, *sagallu*, *sagbānu*, *BAM* 338, 26 and dupls., variant from *STT* 138:23.

⁷⁰ LÚ.U₁₈.LU is to be read *amēlu*. *CAD* Z s.v. *zû* reads *amēlūtu* (NAM.LÚ.U₁₈.LU).

⁷¹ CAD L s.v. lummu 246a (meaning uncertain), makes reference to this text, variant to lamāmu "to chew."

iii 13	If a sore breaks out on a man's foot and festers (becomes ready) like a boil, <i>sagbānu</i> is its name. You soak moldy bread ⁷² and he will recover.
iii 14	If ditto: you rub (the sore) with human excrement and he will recover.
iii 14a	If ditto: you char dust locust, you pound (it and) sprinkle (on the sore) and he will recover.
iii 15	If ditto: you rub with blood from the kidney of an ox. You char chaff taken from straw (and) you pound (it and) sprinkle (it on the sore) and he will recover.
iii 15a	If ditto: you dry and pound <i>irrû</i> -plant. Ditto, and he will recover.
iii 16	If ditto: you rub the surface of the sore with oil (or) ghee. You dry (and) pound pomegranate rind, sprinkle (it on the sore).
iii 17	If ditto: you pound baluhhu-resin (and) apply (it) on the surface (of the sore).
iii 17a	If ditto: you rub the surface of the sore with oil. You pound date stone. Ditto.
iii 18	If ditto: you rub the surface of the sore with cedar oil (or) ghee. You pound
	together juniper, kukru (and) kamūnu (cumin?). Ditto.
iii 19	If ditto: you char (and) pound palm leaf. Ditto.
iii 19a	If ditto: You char charcoal of palm leaf, chaff taken from straw (and) <i>mirṣu</i> -cake. You decoct (the mixture) in <i>kasû</i> -juice. You bandage (the sore).
iii 20	If ditto: you char and pound <i>mirṣu</i> -cake. You decoct (it) in <i>kasû</i> -juice. You bandage (the sore).
iii 20a	If ditto: you pound a tamarisk leaf. You rub cedar resin (and) apply it (the crushed leaf) on the surface (of the sore).
iii 21	If ditto: you chew wax (to soften it by chewing). You bandage (with it).
iii 21a	If ditto: you rub (it) with honey. You apply cedar charcoal on the surface (of the sore).
iii 22	If ditto: you rub (it) with honey. You char and pound the neck of a turtledove. Ditto.

 $^{^{72}}$ Moldy bread is a very rare *materium medicum* in Mesopotamian medicine. Reference to a liquid would be expected here, but not necessarily so. The softened moldy bread was presumably placed on the sore.

⁷³ This is the only title of an incantation mentioned in this text, and it is difficult to precisely acertain the context in which this was to be recited. Col. ii 68 mentions a prescription for the treatment of a kind of an itching sore (rutibtu kīlūtu) that can appear either on the foot or on the scrotum. This prescription is followed by ten additional prescriptions for treating rutibtu in lines ii 70-iii 12. Beginning with col. iii 13-22, however, a series of sixteen prescriptions for the treatment of the sagbānu sore is listed. Although the text does not indicate that this kind of sore could appear on the scrotum, line 23 mentions the incantation title that evidently makes reference to the scrotum ina iški(ŠIR). The possibility that it might refer to the potency of the patient as a side effect could not be confirmed in the list of incantations to be recited in rituals to restore a man's potency (see R.D. Biggs, ŚÀ.ZI.GA Ancient Mesopotamian Potency Incantations 1967). It is interesting to note that in the Sumerian of Gilgamesh and The Netherworld, when Enkidu returns after having retrieved their playthings from the Netherworld, Gilgamesh is curious to know about the condition of the spirits that live there and asks Enkidu a series of questions to which Enkidu replies. He asks: 'Did you see the young man who had not bared the lap of his wife?' 'I saw him.' 'How does he fare?' 'He is finishing a hand-worked rope, he weeps over that handworked rope.' A woman who had not had sexual relations with a man is described as "finishing a hand-worked reed mat" over which she weeps. (A.R. George, *The Babylonian Epic of Gilgamesh*, II, 775) Does the idea of the rope in the incantation hark back to the symbolism in the epic? What exactly is meant by ina ebil mērešta (note the unusual spelling), (CAD s.v. mērešta A and B) cannot be established, as the text of this incantation is not known. An additional question is presented by the form *mērešta* where *mērešti* would be expected. It seems as though the sentence were left unfinished.

⁷⁴ It is possible, though not definite, that this line refers to the rituals for $sagb\bar{a}nu$ that are to follow, hence, the reading $sagb\bar{a}nu$ at the end of the line. Note the unusual spelling with a $b\acute{a}$.

⁷⁵ The transcription *AMT* 75, 25 reads a clear *ma-la* which cannot be discerned on the photograph due to damage to the tablet. The emendation *ma-la* would not be syntactically possible. The emendation *malmališ* is based on other similar well-documented contexts. There is enough space for these three signs.

⁷⁶The emendation is based on context. There seems to be no room for another sign.

⁷⁷ *CAD* P, 1 s.v. *pa'āşu*.

⁷⁸ The MIN is very faintly discernable and therefore uncertain. The reading KI.MIN is, however, somewhat problematic. If an alternative prescription was intended in this same line, as, for example, above in lines 14, 17 19 or 20 of this column, the separating GAM sign and a *šumma*(DIŠ) would be expected before the KI. As only the KI is clearly seen, a possible reading that would fit the context and is well-attested in medical prescriptions could be *qi-suluppi* "the skin of a date". The fact that a sign, in this instance *lip*, is to be emended is not an exception in this text.

iii 23	Incantation: The ones who know, they know. In the scrotum with the rope of desire (?)	
iii 24	If ditto?: x [] (uninscribed portion) sagbānu.	
iii 25	If ditto: [] You pound all these plants [in equal quantities] you mix together (and) decoct (them) in $kas\hat{u}$ -juice. You bandage (the sore) and he will recover.	
iii 26	[If a man (has)] <i>sagbānu</i> , you rub with ghee. You crush the leaf of a pomegranate tree (and) you sprinkle (it on the sore) for four days and he will recover.	
iii 27	[If ditto:] You mix together [] and baluhhu-resin. Ditt you char (and) crush a date. You rub with oil. You sprinkle (it on the sore) an he will recover.

⁷⁹ The emendation is based on context.

The *mahirtu* is a leg bone that is listed in Erimhuš II 217 U.NA = *ma-hir-tú* before the entry for *kabbartu* (Erimhuš II 218), an indication that these two large bones of the lower leg were meant here. CAD identifies this bone as possibly being the fibula. As we have seen above, however, the evidence points rather to the fact that *kabbartu* corresponds to the fibula (see above, introductory section). As the *mahirtu* is also mentioned before the thinner *kabbartu*, the *mahirtu* is the much larger bone, the tibia. A reference to the *mahirtu* of a jenny (female donkey) is mentioned in an incantation *STT* 215 ii 70 (dupl. *KAR* 88 rev. iii 16) *ina maḥirti atāni*(ANŠE^{MUNUS}) *qāssu*(Š[U-s]*u limhaṣ* "may he (Ningirsu) hit his hand with a *maḥirtu* bone of a jenny." (E. Ebeling, "Sammlungen von Beschwörungsformeln" *ArOr* 21(1953) 413). We are not told whether the bone came from the foreleg or the hindleg of the animal. The *maḥirtu*, therefore, seems to have been one of the larger bones, as the tibia in the human leg.

⁸¹ Unclear, in broken context. Traces could point to MAR for *tazarru*, but the context requires a SÚD.

⁸² In view of the parallel in Ms. B iii 18, this line is probably to be understood with the same word order, rather than roasting and powdering both the $sahl\hat{u}$ and the $kas\hat{u}$. See also iv 42.

⁸³ There are two problems here. It is unusual to write *ina* 4.KÁM u_4 -me where *ina* u_4 -me 4.KÁM is expected. The traces of the sign DÀRA.MAŠ are questionable.

iii 28	[If a man's] tibia is <i>nuḥḥuru</i> -ed: you pound the horn of a deer (and) mix (it) in oil. You rub (and) sprinkle (it on the affected area) and he will recover.

⁸⁶ The second part of the prescription is identical to the prescription in col. iii 8 which is for the *rutibtu*-disease, as the last prescription in col. ii 70 is for that disease. But we cannot know for which particular disease this prescription (col. iv 5) was meant, as the text breaks off at the end of col. iii. It can be, however, safely surmised that the affliction dealt with is an open sore, as the prescriptions that follow instruct us that the surface of the sore be washed and oiled before the medication is applied.

⁸⁷ Syllabic spelling in iii 9.

⁸⁸ The meaning of a " $n\bar{u}du$ of a fish" is unknown. As the resultant mixture is poured, it must be a liquid. Could it be a type of fish broth?

⁸⁹ Št-stem from *emēdu* "to mix."

iv 5	If ditto. You wash the surface of the sore (and) rub (it) with oil. You pound together seeds of <i>maštakal</i> (and) seeds of <i>sikillu</i> . You decoct (them) in <i>kasû</i> -juice. You bandage (the sore) and he will recover.	
iv 6-7	If ditto: You wash the surface of the sore (and) rub (it) with oil. You decoct seeds of <i>urnû</i> , seeds of <i>sikillu</i> -plant, seeds of 'dog's tongue'-plant in <i>kasû</i> -juice. You moisten it with oil and bandage (the sore) and he will recover.	
iv 8	If ditto: You wash the surface of the sore (and) rub (it) with oil. You decoct cumin seeds (and) lettuce seeds in <i>kasû</i> -juice. You bandage (the sore) and he will recover.	
iv 9	If ditto: You wash the surface of the sore (and) rub (it) with oil. You mix these plants in wax. You bandage (the sore) and he will recover.	
iv 10	If ditto: You wash the surface of the sore (and) rub (it) with oil. You pound together <i>sikillu</i> , leaf of <i>lipāru</i> -tree, (and) <i>urânu</i> . You sprinkle (on the sore) ar he will recover.	
iv 11	[] x peel of the male <code>hasû-plant</code> you mix (these?) in "nīdu" of a fish. You pour it into his anus ⁹⁰ and he will get well (lit. live).	
iv 12	[] x (you mix) peel of ħašû-plant in milk of a virgin kid. You pour it into his anus and he will get well (lit. live).

⁹¹ See *CAD* R s.v. *rasānu* (*raṣānu*) 180b.

⁹² Injury to the heel bone (*calcaneus*) can occur as a result of a heavy object falling on it or from a fall from a height and landing on the feet. As it is due to the force of the impact exerted by the two large bones of the lower leg (tibia and fibula) on the talus which sits above the heel bone, on the one hand, and the hard ground underneath the heel, on the other, the heel bone can in fact shatter (*parāru*).

⁹³ From *letû* "to split." The condition described here affects both heels and probably refers to the condition of "cracked heels" which is a common problem caused by wearing thin soled sandals or going bare-foot combined with poor hygiene. As the skin of the heel dries out and a thick callus forms, cracks in the skin occur which can be deep and can become infected due to dirt collecting in the cracks. This condition can be seen even today especially in the rural areas in the Near East. It is interesting to note that fat constitutes one of the prescribed ingredients, as it is today to relieve the discomfort.

iv 14	[] tarmuš-plant [] x-plant [] He drinks (these) on an empty stomach and he will get well (lit. live).	
iv 15	[] You soak in water [plant] hašû-plant [plant, and] suādu-aromatic plant. You let it stand under the stars (overnight).	
iv 16	In the morning you [pour it out] He drinks (this) on an empty stomach and he will get well (lit. live).	
iv 17	If a man's heel is shattered, you dry and crush <i>tūru</i> -plant. You decoct (it) in <i>kasû</i> -juice in a <i>tangussu</i> -vessel. You bandage (the heel).	
iv 18	If ditto: you dry and crush <i>irrû</i> -plant. You mix it with fat (and) bandage (the heel).	
iv 19	If a man's heels are split (cracked heels), you mix a <i>mubattir</i> -insect (type of locust) of the field in fat (and) you bandage (the heels).	
iv 20	If ditto, but it (the condition) is old ⁹⁴ : you dry and pound a river crab. You put []	
iv 21	If ditto: You dry, pound <i>aktam</i> -plant, (and) sprinkle (it on the heels).	
iv 21a	If ditto: You pound myrrh [
iv 22	If ditto: You pound <i>šumuṭṭu</i> -plant (and) mix it in fat. You bandage (the heels)
